

## Solomon API Tactical 40-60 Moderate

Model Factsheet As of  
12-31-2022

### Portfolio

The Solomon API Tactical 40-60 Moderate Portfolio invests in a diversified portfolio of index-based, liquid exchange traded funds (ETFs) and mutual funds. ETFs in the portfolio are comprised of a broad spectrum of major asset classes both domestic and international - whose underlying investments are deemed attractive in the current market cycle. The portfolio can invest in equities, bonds and commodity ETFs with leverage. Asset class selections are determined by a proprietary algorithm that evaluates market conditions and applies asset allocation strategies accordingly. The algorithm monitors each asset class separately and can be in or out of those asset classes as the algorithm decides. To further manage drawdown risk the portfolio maintains the flexibility to move into U.S. Treasuries or other cash equivalents in severe down markets.

### Firm Profile

Solomon API is a registered investment advisor. Solomon API's proprietary algorithm is intended to reduce risk by limiting losses during large down markets and participate fully in up markets.

### Max Drawdown (net of maximum 3.00% advisory fee)

Time Period: 5/1/2018 to 12/30/2022

— Solomon API Tactical 40-60 Moderate

— Vanguard Balanced ETF Portfolio

Solomon API seeks returns that exceed the performance of the S&P 500 Index over a full market cycle. Illustrated returns are net of fees. By utilizing (API) Advanced Portfolio Intellect investment strategy, investors are more likely to be shielded from market downturns such as those seen in the last two bear markets.

### Investment Growth

Time Period: 5/1/2018 to 12/31/2022

— Solomon API Tactical 40-60 Moderate (Gross)

— Solomon API Tactical 40-60 Moderate (Net)

The Solomon API Tactical 40-60 Moderate Portfolio is constructed by seeking to limit volatility (drawdown) of the portfolio from peak to trough over a full market cycle. The investment allocation is distributed among major asset classes with a focus on growth and diversification. This portfolio has the ability to move one hundred percent (100%) to short-term bonds and or non-correlated assets when (API), Advanced Portfolio Intellect system deems appropriate.

Solomon API LP is registered as an investment advisor. Solomon API LP results are those of Solomon API Tactical 40/60 Moderate. Gross returns are "pure" gross returns and do not reflect the deduction of any expenses, including trading costs, and are presented as supplemental information. Net returns are calculated by reducing gross returns with an assumed maximum annual SMA fee of 3.0% (which is assumed to be equal to or higher than the highest actual SMA fee charged by a program sponsor), applied monthly. Tactical 40/60 Moderate inception: May 1, 2018. Indexes are unmanaged, do not incur management fees, costs and expenses, and cannot be invested in directly. All returns include reinvestment of dividends and interest. Performance data is historical. Past performance does not guarantee future results. Current performance may be lower or higher than the performance quoted. Investing involves risk including possible loss of principal. Portfolio data is from a representative Tactical 40/60 Moderate account and is presented as supplemental that is considered an integral part of the above presentation. Individual portfolio characteristics may vary from that of the representative portfolio. All statistics except for Weighted Average Market Capitalization, Current Yield, Active Share and Annual Turnover are median values. Current Yield of a stock is the annual dividend per share divided by price per share. Price/Earnings Ratio shows the multiple of earnings at which a stock sells as determined by the ratio of the company's most recent month-end share price to the company's earnings per share for the trailing twelve months (TTM). Price/Book ratio shows a company's most recent month-end share price to the company's book value per share for the trailing twelve months. Book value is the total assets of a company, less total liabilities. Return on Assets is the percentage a company earns on its assets in a given year. Net income divided by total assets shows how effectively a company uses its assets to generate profits. Return on Equity is the percentage a company earns on shareholders equity. Net income divided by average shareholder's equity indicates how effectively management has invested shareholder's equity. Active Share measures the percentage of holdings in a representative Tactical 40/60 Moderate Portfolio that differ from the benchmark holdings either in name or weight monthly. Performance returns are represented on Morningstar Direct which can be different from actual trading using client assets. Annual Turnover represents the average percentage of a representative portfolio's holdings that have changed annually since the strategy's inception.
